# SCAT6<sup>™</sup>

Sport Concussion Assessment Tool For Adolescents (13 years +) & Adults

# What is the SCAT6?

The SCAT6 is a standardised tool for evaluating concussions designed for use by Health Care Professionals (HCPs). The SCAT6 cannot be performed correctly in less than 10-15 minutes. Except for the symptoms scale, the SCAT6 is intended to be used in the acute phase, ideally within 72 hours (3 days), and up to 7 days, following injury. If greater than 7 days post-injury, consider using the SCOAT6/Child SCOAT6.

The SCAT6 is used for evaluating athletes aged 13 years and older. For children aged 12 years or younger, please use the Child SCAT6.

If you are not an HCP, please use the Concussion Recognition Tool 6 (CRT6).

Preseason baseline testing with the SCAT6 can be helpful for interpreting post-injury test scores but is not required for that purpose. Detailed instructions for use of the SCAT6 are provided as a supplement. Please read through these instructions carefully before testing the athlete. Brief verbal instructions for each test are given in *blue italics*. The only equipment required for the examiner is athletic tape and a watch or timer.

This tool may be freely copied in its current form for distribution to individuals, teams, groups, and organizations. Any alteration (including translations and digital reformatting), re-branding, or sale for commercial gain is not permissible without the expressed written consent of BMJ.

## **Recognise and Remove**

A head impact by either a direct blow or indirect transmission of force to the head can be associated with serious and potentially fatal consequences. If there are significant concerns, which may include any of the Red Flags listed in Box 1, the athlete requires urgent medical attention, and if a qualified medical practitioner is not available for immediate assessment, then activation of emergency procedures and urgent transport to the nearest hospital or medical facility should be arranged.

## **Completion Guide**

Orange: Optional part of assessment

# Key Points

- Any athlete with suspected concussion should be REMOVED FROM PLAY, medically assessed, and monitored for injuryrelated signs and symptoms, including deterioration of their clinical condition.
- No athlete diagnosed with concussion should return to play on the day of injury.
- If an athlete is suspected of having a concussion and medical personnel are not immediately available, the athlete should be referred (or transported if needed) to a medical facility for assessment.
- Athletes with suspected or diagnosed concussion should not take medications such as aspirin or other anti-inflammatories, sedatives or opiates, drink alcohol or use recreational drugs and should not drive a motor vehicle until cleared to do so by a medical professional.
- Concussion signs and symptoms may evolve over time; it is important to monitor the athlete for ongoing, worsening, or the development of additional concussion-related symptoms.
- The diagnosis of concussion is a clinical determination made by an HCP.
- The SCAT6 should NOT be used by itself to make, or exclude, the diagnosis of concussion. It is important to note that an athlete may have a concussion even if their SCAT6 assessment is within normal limits.

## Remember

- The basic principles of first aid should be followed: assess danger at the scene, athlete responsiveness, airway, breathing, and circulation.
- Do not attempt to move an unconscious/unresponsive athlete (other than what is required for airway management) unless trained to do so.
- Assessment for a spinal and/or spinal cord injury is a critical part of the initial on-field evaluation. Do not attempt to assess the spine unless trained to do so.
- Do not remove a helmet or any other equipment unless trained to do so safely.

Sport Concussion Assessment Tool 6 - SCAT6™

SCAT6<sup>™</sup>

Athlete Name: Date of Birth:

Time of Injury:

Dominant Hand: Left

Step 1: Observable Signs

otop il obcol tablo olgilo		
Witnessed Observed on Video		
Lying motionless on playing surface	Y	N
Falling unprotected to the surface	Y	N
Balance/gait difficulties, motor incoordination, ataxia: stumbling, slow/ laboured movements	Y	N
Disorientation or confusion, staring or limited responsiveness, or an inability to respond appropriately to questions	Y	N
Blank or vacant look	Y	N
Facial injury after head trauma	Y	N
Impact seizure	Y	N
High-risk mechanism of injury (sport- dependent)	Y	N

## Step 2: Glasgow Coma Scale

Typically, GCS is assessed once. Additional scoring columns are provided for monitoring over time, if needed.

#### Time of Assessment:

Date of Assessment:

Best Eye Response (E)			
No eye opening	1	1	1
Eye opening to pain	2	2	2
Eye opening to speech	3	3	3
Eyes opening spontaneously	4	4	4
Best Verbal Response (V)			
No verbal response	1	1	1
Incomprehensible sounds	2	2	2
Inappropriate words	3	3	3
Confused	4	4	4
Oriented	5	5	5
Best Motor Response (V)			
No motor response	1	1	1
Extension to pain	2	2	2
Abnormal flexion to pain	3	3	3
Flexion/withdrawal to pain	4	4	4
Localized to pain	5	5	5
Obeys commands	6	6	6
Glasgow Coma Score (E + V + M)			

For use by Health Care Professionals only

## Box 1: Red Flags

- Neck pain or tenderness
- Seizure or convulsion
- Double vision
- Loss of consciousness
- Weakness or tingling/burning in more than 1 arm or in the legs

 $\overline{\Theta}$ 

- Deteriorating conscious state
- Vomiting
- Severe or increasing headache
- Increasingly restless, agitated or combative
   GCS <15</li>
- Visible deformity of the skull

### **Step 3: Cervical Spine Assessment**

In a patient who is not lucid or fully conscious, a cervical spine injury should be assumed and spinal precautions taken.

Does the athlete report neck pain at rest?	Y	Ν
Is there tenderness to palpation?	Y	Ν
If NO neck pain and NO tenderness, does the athlete have a full range of ACTIVE pain free movement?	Y	N
Are limb strength and sensation normal?	Y	Ν

## Step 4: Coordination & Ocular/Motor Screen

Coordination: Is finger-to-nose normal for both hands with eyes open and closed?	Y	N
Ocular/Motor: Without moving their head or neck, can the patient look side-to-side and up-and-down without double vision?	Y	N
Are observed extraocular eye movements normal? If not, describe:	Y	N

#### Step 5: Memory Assessment Maddocks Questions<sup>1</sup>

Say "I am going to ask you a few questions, please listen carefully and give your best effort. First, tell me what happened?"

Modified Maddocks questions (Modified appropriately for each sport; 1 point for each correct answer)

What venue are we at today?	0	1				
Which half is it now?	0	1				
Who scored last in this match?	0	1				
What team did you play last week/game?	0	1				
Did your team win the last game?	0	1				
Maddocks Score /5						
Note: Appropriate sport-specific questions may be substituted						

British Journal of Sports Medicine

## **Off-Field Assessment**

Please note that the cognitive assessment should be done in a distraction-free environment with the athlete in a resting state after completion of the Immediate Assessment/Neuro Screen.

	Step 1: Athlete Background									
	Has the athlete ever been:									
	Hospitalised for head injury? (If yes, describe below)	Y	Ν	Diagnosed with attention deficit hyperactivity disorder (ADHD)?	Y	Ν				
	Diagnosed/treated for headache disorder or migraine?	Y	N	Diagnosed with depression, anxiety, or other psychological disorder?	Y	N				
	Diagnosed with a learning disability/dyslexia?	Y	Ν							
	Notes:			Current medications? If yes, please list:						

# Step 2: Symptom Evaluation

Baseline:

Suspected/Post-injury: Time

Time elapsed since suspected injury:

The athlete will complete the symptom scale (below) after you provide instructions. Please note that the instructions are different for baseline versus suspected/post-injury evaluations.

Baseline: Say "Please rate your symptoms below based on how you <u>typically</u> feel with "1" representing a very mild symptom and "6" representing a severe symptom."

Suspected/Post-injury: Say "Please rate your symptoms below based on how you feel now with "1" representing a very mild symptom and "6" representing a severe symptom."

#### PLEASE HAND THE FORM TO THE ATHLETE

Symptom			R	ati	ng			
Headaches	0	1	2	3	4	5	6	
Pressure in head	0	1	2	3	4	5	6	
Neck pain	0	1	2	3	4	5	6	
Nausea or vomiting	0	1	2	3	4	5	6	
Dizziness	0	1	2	3	4	5	6	
Blurred vision	0	1	2	3	4	5	6	
Balance problems	0	1	2	3	4	5	6	
Sensitivity to light	0	1	2	3	4	5	6	
Sensitivity to noise	0	1	2	3	4	5	6	
Feeling slowed down	0	1	2	3	4	5	6	
Feeling like "in a fog"	0	1	2	3	4	5	6	
"Don't feel right"	0	1	2	3	4	5	6	
Difficulty concentrating	0	1	2	3	4	5	6	
Difficulty remembering	0	1	2	3	4	5	6	
Fatigue or low energy	0	1	2	3	4	5	6	
Confusion	0	1	2	3	4	5	6	
Drowsiness	0	1	2	3	4	5	6	
More emotional	0	1	2	3	4	5	6	
Irritability	0	1	2	3	4	5	6	
Sadness	0	1	2	3	4	5	6	
Nervous or anxious	0	1	2	3	4	5	6	
Trouble falling asleep (if applicable)	0	1	2	3	4	5	6	
PLEASE HAND THE FORM BACK TO THE EXAMINER								
Once the athlete has completed answering all symptom items, it may be useful for the clinician to revisit items that were endorsed positively to gat more detail about each symptom.

## **Step 3: Cognitive Screening (Continued)**

## Concentration

#### Digits Backward:

Administer at the rate of one digit per second reading DOWN the selected column. If a string is completed correctly, move on to the string with next higher number of digits; if the string is completed incorrectly, use the alternate string with the same number of digits; if this is failed again, end the test.

Say "I'm going to read a string of numbers and when I am done, you repeat them back to me in reverse order of how I read them to you. For example, if I say 7-1-9, you would say 9-1-7. So, if I said 9-6-8 you would say? (8-6-9)"

List A       List B       List C         4.9-3       5-2-6       1.4-2       Y       N       0       1         6-2-9       4.1-5       6-5-8       Y       N       0       1         3-8-1.4       1.7-9-5       6-8-3-1       Y       N       0       1         3-2-7-9       4-9-6-8       3-4-8-1       Y       N       0       1         6-2-9-7.1       4-8-5-2-7       4-9-1-5-3       Y       N       0       1         1-5-2-8-6       6-1-8-4-3       6-3-2-5-1       Y       N       0       1         7-1-8-4-6-2       8-3-1-9-6-4       3-7-6-5-1-9       Y       N       0       1         5-3-9-14-8       7-2-4-8-5-6       9-2-6-5-1-4       Y       N       0       1         Star stopware       Order       Star stopware	Digit list used: A B C

Modified BESS	(20 seconds each)	On Foam (Optional)						
Double Leg Stance:	of 10	Double Leg Stance:	of 10					
Tandem Stance:	of 10	Tandem Stance:	of 10					
Single Leg Stance:	of 10	Single Leg Stance:	of 10					
Total Errors:	of 30	Total Errors:	of 30					

Note: If the mBESS yields normal findings then proceed to the Tandem Gait/Dual Task Tandem Gait.

If the mBESS reveals abnormal findings or clinically significant difficulties, Tandem Gait is not necessary at this time.

Both the Tandem Gait and optional Dual Task component may be administered later in the office setting as needed (see SCOAT6).

## **Timed Tandem Gait**

Place a 3-metre-long line on the floor/firm surface with athletic tape. The task should be timed. Please complete all 3 trials.

Say "Please walk heel-to-toe quickly to the end of the tape, turn around and come back as fast as you can without separating your feet or stepping off the line."

## Step 4: Coordination and Balance Examination (Continued)

Were any single- or dual-task, timed tandem gait trials not completed due to walking errors or other reasons?

Yes		No	
-----	--	----	--

If yes, please explain why:

## **Step 5: Delayed Recall**

The Delayed Recall should be performed after at least 5 minutes have elapsed since the end of the Immediate Memory section: Score 1 point for each correct response.

Say "Do you remember that list of words I read a few times earlier? Tell me as many words from the list as you can remember in any order."

#### Time started:

Word list used: A B	с	Alternate Lists			
List A	Score	List B	List C		
Jacket	0 1	Finger	Baby		
Arrow	0 1	Penny	Monkey		
Pepper	0 1	Blanket	Perfume		
Cotton	0 1	Lemon	Sunset

Additional Clinical Notes							

Note: Scoring on the SCAT6 should not be used as a stand-alone method to diagnose concussion, measure recovery, or make decisions	
about an athlete's readiness to return to sport after concussion. Remember: An athlete can score within normal limits on the SCAT6 and	
still have a concussion.
